

SA90 – Safecom's Advanced 90° Wall Socket (Molding Patent)

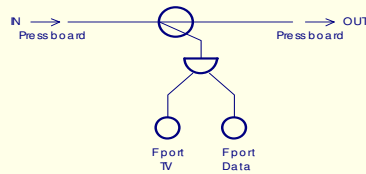

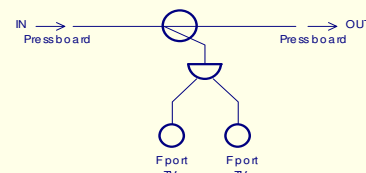

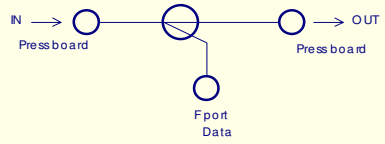

Advanced 90° Wall Socket – the SA-90 - is the perfect solution to an age-old problem familiar to all cable company service centers. Your customer just moved their furniture or the TV set - usually for cleaning - and they complain of "No Service".

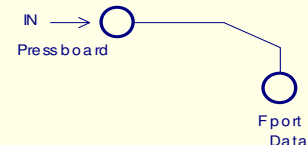

Typically, this is caused by the mechanical pressure on the coax cable, connected horizontally to the socket. Safecom AWS-90 connection is created parallel to the wall thus preventing all such occurrences – saving precious call center, and often technician time.

- ✓ **Unique vertical output - Fully protected from external hit**
- ✓ **High performance TV Socket with 90 degree vertical F-Connectors**
- ✓ **Easy installation without any adaptors**
- ✓ **Super Digital-Ready broadband performance**
